-> Make beautiful, groovy music! Bandleader is an easy to use, self-contained environment where you compose -> Create leadsheets using simple drag-and-drop with already-existing music elements -> Use different randomization and alternation features for unique and beautiful compositions -> Use existing open source software to create and edit your leadsheet

Ethernate is a programming environment with emphasis on productivity and modularity. It incorporates features from many languages (Perl, Python, Ruby, Java, Scala, and many more) and environments (JRuby, Jython, Jython embedded and Jython embedded embedded Jython).

Ableton Live (formerly known as Logic Express) is the 64-bit, multi-platform, multi-track, audio sequencer, mixer and MIDI controller from Ableton, the global leader in music technology software. With the Live App for iPad and iPhone, Ableton Live turns your device into a powerful, multi-track control surface and music production studio. Record and mix audio at professional quality. Edit audio, MIDI and audio-video clips, and automate almost anything. Use over 50 factory-installed devices, including 16 drum kits, 19 guitar amps and cabinets, 20 complete drum and percussion kits, and a wide range of synths, sequencers and more, making it the perfect tool for musicians of all kinds.

Sigma (originally Artur Dawes Society and LPS Music Ltd) is an international music publishing association. Sigma's Archive is a freely available index of all copyrighted scores published by the members. It is an unofficial, non-commercial and autonomous archive, since scores in the archive are not selected by the Association. The Archive is the online database of the entire literature of the Music Publishing business.

Snippet is an easy to use web application for designing music notation templates that can be used on any musical instrument. Choose from a number of starting templates and customize them to your liking. Include or exclude different sections and design notes with the different tools at your disposal. Save your notes as HTML or PDF and use them wherever you wish - no matter if you are a lone musician or teaching, composing for bands, orchestras or choirs.

Music Making (formerly Music Without Theory) is a site dedicated to providing the artistically creative musician with tools, tips, tricks, ideas and inspiration to all areas of the artist's creative process, from composing, recording, editing, mixing and mastering, to marketing and label/publishing

Bandleader is an open source (GPL) program that makes it easier to create band leader style sheet and transpose lyrics, lead sheets and melodies in your favorite song notation software. I started Bandleader in my spare time before I ever knew what guitar songs really looked like (which was after a couple of years of playing the guitar), but now a lot of musicians are using it to create sheet music for their songs on their own or together with their band. So maybe it would be worthwhile to collect some of the thoughts and ideas here and start a wiki on what people use it for.

Bandleader supported: Free. Differences compared to Lilypond: It is super easy to use. You can easily add barlines. It is capable of producing digital piano sheets like Lilypond can. You can easily change the transposition at the end of a line with a smaller padding between notes. You can easily add chords in Lilypond-style. Your song is never saved permanently, you can work on it and add changes later on. When you are done working on it, you can take a screenshot and save it to your hard drive.

Bands that support Lilypond: It depends on the band you play in and/or where you record in. You will often have to use a special instrument at a special venue. If that is the case for you, you are probably already using Lilypond to save your songs since people still want to hear them in the end. If the band uses something different, you can use Bandleader to create song sheets (leadsheets) for them before they play your song.

What people use it for The good thing about Bandleader is that it is really easy to use, so even people with very little music knowledge can start working on it right away. So bandleader people often create leadsheets for their songs and have a bandleader style in their setlist. A bandleader style is a song that defines the instruments you are playing. Bandleader also gives you some basic transpositions of the song which are used to change the pitch (transpose) of the song. These are also important because they make it easy for the band to change instruments when they play your song. The following topics are ideas I often see when people want to get started with Bandleader. Using Bandleader for teaching: You can also simply use the inbuilt
