EasyNetMonitor Crack Free Download [32|64bit]

EasyNetMonitor is a simple-to-use utility that verifies if a remote computer is accessible in your network. It targets all types of users. After a brief installation procedure, EasyNetMonitor creates an icon in the system tray area. By opening the context menu, you can add as many computer addresses as you want and create a separate tray icon for each one. From the Options panel you can configure several settings, such as establishing the time interval for the IP checkup, as well as enabling the ping function when the tray menu is opening. Furthermore, EasyNetMonitor can be scheduled to run at Windows startup automatically and to log details to an external file. It is also possible to disable EasyNetMonitor from the context menu without actually exiting the application. The network monitoring tool requires a low quantity of CPU and system memory, so it doesn't burden the computer's overall performance. It has a good response time to key strokes and mouse commands, and it's very stable. The app didn't cause us any difficulties throughout our evaluation, like hanging, crashing or showing error notifications. Although it is not very resourceful, EasyNetMonitor offers a simple and effective solution to test if a computer is reachable via LAN. Key Features: - Support of several remote computers - Automatic (schedule) and manual testing - Easy installation - Lightweight and fast - Native version for Windows XP/Vista/7/8 - Options panel - Monitoring History log - Customizable logging - Accessibility for various users - Tracing and Alerting - Context menu - Tray Menu - Scheduling - Startup and System tray options - Status toggles - Status window - User definable icon - Environment variables settings - Unit conversion - Date/time timezone settings - Undo/redo feature - Copy/paste functionality - Options window - Import/export of configuration - System requirements

KeyMACRO is a keyboard driver that you can use to debug, improve and maintain your keyboard shortcuts. It is extremely useful because it allows you to easily use the F8 key, the F10 key or any other key you want to access the Options menu. The application automatically creates a registry entry and a shortcut in the Start Menu in order to have a quick access to the menu when the keyboard is not connected. KeyMACRO is a free utility, you don't have to pay for the license. It can't create registry entries, start menu shortcuts or change the F8 key configuration, it only detects and creates the registry entries when the user is pressing the keyboard's F8 key. KEYMACRO works with all keyboards, including wireless ones. It can also test the Microsoft OEM version of your keyboard and the BIOS version that your motherboard is configured to use. KeyMACRO requires approximately 100 KB of RAM and a processor with two cores. The whole application is around 10 MB in size, so it doesn't have a negative impact on the computer's performance. The most significant advantage of KeyMACRO is that it can be used without a mouse. The user can keep the application open in order to access the options without having to exit the application. The main drawback is that some functions (like creating registry entries) can only be done from the keyboard.

AdvancednX Network Administrator Description: AdvancednX Network Administrator is a handy tool that allows you to perform several functions related to network connection and IP address configuration. It has a Windows Forms interface that can be easily controlled with the mouse. The utility features a tree-based window in which all of the network details can be found. In addition, the application allows the user to specify the computer's IP address, Internet protocol version and IP address range. Furthermore, AdvancednX Network Administrator allows the user to change and/or adjust all of the network settings. Among its main features, we can find an IP address block chooser, a list of all available IP addresses, a network card list, a DHCP server list, and a Windows Firewall list. There is also a list of predefined IP address ranges. The application provides a list of active and inactive connections and, in addition, we can check if any of them has been assigned to a particular IP address. The AdvancednX Network Administrator also shows which computers are assigned to a specific IP address and the number of IP addresses that are currently being used by the computer.
