

The Intel C++ 16 compiler fails when compiling one of the following code: Parallel Studio XE 2015 Composer Edition C++ for Windows and MS Visual Studio 2010. I have an application that is used with other applications to perform operations on integers. This application uses Parallel Studio XE 2015 Composer Edition C++ for Windows and MS Visual Studio 2010. The compiler gives me an error when I try to compile one of the following code I tried Parallel Studio XE 2015 Composer Edition on VirtualBox and it worked fine. I can't figure out why this doesn't work on my system. Any ideas
