It is also known for its ability to generate a 3D model of any surface, even when the surface is curved, with a small volume of data, allowing for very high precision. Since 2010, the U.S. Air Force adopted the FDM variant as its standard digital modeler. Its use has expanded to the Armed Forces in several other countries. AutoCAD was once considered a powerful tool, and was even employed by a state agency in Brazil in the late 1980s to assist in flood-relief efforts. It is also a standard product for use by the U.S. military in the field of remote sensing and imagery. In 2002, the U.S. military purchased a majority share in the company, which was later acquired by Autodesk. The company has been awarded a few military contracts in recent years. In 2012, the company announced that it was working on a GIS extension for AutoCAD, to allow the creation of geodatabase files, and the 2016 release of the add-on product Autodesk Terrain allows for the creation of surface models, elevation data, and mapping. AutoCAD can be used for several types of governmental contracts. It can create models and collect data, and is also used for aeronautical data.
