History [edit] AutoCAD was introduced by the company named E.L. Robinson (later renamed Autodesk). For marketing purposes, Autodesk originally called the software "AutoCAD LITE", and it was released in December 1982 as a desktop app running on microcomputers with internal graphics controllers. Before AutoCAD was introduced, most commercial CAD programs ran on mainframe computers or minicomputers, with each CAD operator (user) working at a separate graphics terminal. The first release of AutoCAD was in a native DOS version running on Apple II computers. In 1985, Autodesk released version 3 of AutoCAD as a native OS/2 version that ran on IBM PC computers, Apple II and Macintosh computers. The first version of AutoCAD to be released for the Macintosh was version 3, in 1985. A Macintosh version of AutoCAD that ran on Apple II computers was released with version 2.0 in 1986. In 1990, Autodesk introduced a new version of AutoCAD for DOS and OS/2 operating systems. This was based on the original version 4. The only major difference between the new version and the previous version 4 was that all of the Microsoft operating systems (Windows 3.x, Windows NT, Windows 95, Windows 98, Windows ME, Windows 2000, Windows XP) were supported, while the previous versions could only run on DOS and OS/2. In 1996, Autodesk released version 5. For the first time, AutoCAD was offered as a subscription service, allowing users to receive new releases of the software. In September 2003, Autodesk released version 2004 of AutoCAD. In 2005, the company released AutoCAD Map 3D (also known as AutoCAD Map 3D Builder). On 14 April 2009, Autodesk released AutoCAD 2009

3D Warehouse The 3D Warehouse, formerly part of DWG since 2006, is one of Autodesk's online 3D content distribution networks (CDN). Its mission is to simplify 3D content retrieval and dissemination. The 3D Warehouse is designed to make it easy for users to find 3D content online and share it with their customers. The 3D Warehouse is operated in a similar way to other Autodesk software distribution networks. 3D content is stored in Autodesk's servers, which can be accessed by clients such as Autodesk Design Review, Autodesk Revit, Autodesk 3ds Max, Inventor and Architectural Desktop. Cracked AutoCAD With Keygen Architecture and Architectural Desktop customers can access content that is available to them through the 3D Warehouse through their viewport, which is stored on Autodesk's servers. On the 3D Warehouse's home page, users can find 3D models and make sure they have enough disk space available for viewing these models. Users can also create a user account to organize content in their own library. The 3D Warehouse is divided into 4 categories: Models: 3D models that can be viewed or downloaded Scenes: 3D models that have already been cut into parts Layers: 3D models that have been set up so that they can be viewed or downloaded Files: Digital 3D model files that can be opened in the 3D Warehouse viewer In addition to viewing the 3D Warehouse's models, users can download content as standard DGN and DWG files. Users can also access and share the content by using Autodesk's AutoCAD's 3D Warehouse to design the site for their project. Pre-existing datasets are available as a public dataset in the Autodesk 3D Warehouse. All model properties such as dimensions and annotation are stored in a property database. These databases can be downloaded and shared with other users for free. Content created by 3D Warehouse users can be added to the 3D Warehouse datasets. Autodesk ReCap Autodesk ReCap is an Autodesk product and a software library for taking 3D geometry files such as 3D Studio or Maya and generating different 2D representations in 2D vector format such as PDF, DWG and DXF. It's the first full desktop browser from the company, and Mozilla says it's more capable than the Google-developed browser. Mozilla will maintain a version of Firefox for Android, although the company is partnering with Google to integrate Google's Android Market into Firefox's home screen (see photo above). "We're hoping that this will be the kind of product that will truly fill a gap in the marketplace, where a company like ours just doesn't have a product," said Jay Sullivan, product manager for Firefox on Android. Firefox for Android supports downloads from the Market, but it does not yet offer a local search function. Both Google and Mozilla say that Firefox for Android will be updated rapidly
