PerfectTUNES is a music player that gathers 10 years of experience in developing efficient music file management software. It allows you to add, rename, organize and remove music files, as well as to find album artwork for them. With perfectTUNES, you can rip your favorite CDs, check your music folders for duplicates and scan your songs for quality errors. PerfectTUNES is a software bundle, containing three utilities that deal with each of its functions individually. Album Art manager Album Art is the PerfectTUNES component that deals with album covers and artwork. It is capable to identify and list the albums contained in your music folder, by reading each file's metadata, and display them along with their cover art. If a file does not contain album artwork, the software can browse the Internet and find it for you. Once you have chosen an image, from among the results of the search, you can save it to your computer and the software automatically assigns it to the proper file. You can easily load another music folder and let Album Art analyze new songs. Identifying duplicates De-Dup is the component that deals with song duplicates, being able to identify them by the title, duration, format and sound quality. It can display the similar files in bundles, so that it is easier for you to analyze them. De-Dup places the file you most likely wish to keep as first option at the top of each duplicate list. It is usually the file that stores the best audio quality. You can keep the rest of the duplicate files or delete them. Checking files for errors AccurateRip can analyze music albums and display them, along with the number of healthy tracks and the files that contain errors due to incorrect CD ripping. The software component can only scan lossless CD quality files. AccurateRip can read results from each music file's ID tag and automatically delete corrupted songs as it detects them. You can view the list of albums and sort them by artist name or date of release.
