Price: \$74.99 monthly (or \$99.99 annually) **Operating systems:** macOS, Windows, iOS, Android and others **Download:** Visit the Adobe site **Best Photoshop alternative:** ACDSee PhotoScan As powerful as Photoshop is, it's sometimes difficult to work with large images. Plus, with other programs like GIMP, it's hard to edit photos outside of its features. Not to mention, many photographers have limited access to the Creative Cloud and can't afford the \$500 annual subscription. That's why I chose ACDSee PhotoScan to be my Photoshop alternative. PhotoScan (\$59) has almost every feature of Adobe Photoshop and a ton of other great features, too. It also has a free version, so it's a powerful tool for beginners or hobbyists. You can use PhotoScan to organize, edit and convert images from your computer and mobile devices. Not only can you capture shots and instantly convert them into high-quality PDFs, you can edit and retouch them to create some great effects. PhotoScan lets you crop, rotate, adjust brightness and contrast, remove red-eye and more. You can adjust images for different types of prints, too. Plus, it has a ton of printing options, including print on demand and booklets. PhotoScan has tons of printing options. PhotoScan is a

Windows only program, but it's well worth the \$59. Price: free to try, \$59.99 for a single user license Operating systems: Windows, Android, iOS Download: Visit the ACDSee site The best alternative: Adobe Lightroom Compared to PhotoScan, Adobe Lightroom is Adobe's powerful video editing software. It has all of the features you need to edit images, but it has a slightly different user interface. It also integrates with Adobe's creative cloud. It's a good alternative for photographers who want to edit images outside of Photoshop. Lightroom is fast and efficient, and it has a lot of useful tools, including the ability to batch process images using Lightroom's in-built Raw Converter, and its new lens tools that include auto-focus, spot removal, auto-stabilization, bracketing and auto white balance. You can work with third-party tools like Photoshop a681f4349e

A great many movies are set in war-torn societies. Yet, little has been done to change our understanding of how war in general, and the Afghanistan War in particular, impacts the civilian populations in which war is fought. The Occupation of Afghanistan: Documentation and Critique moves toward a deeper understanding of this important understanding. Based on actual documentaries on the subject, including one newly-unveiled film that soon will be screened, this DVD offers a critical and sophisticated examination of the media's coverage of the US involvement in Afghanistan, including the failed war on drugs and the media's censored and distorted coverage of the invasion and occupation. Correspondence After the invasion and occupation of Afghanistan, the media has been unrelenting in its eagerness to portray the war in a positive light. Criticism of the anti-drug strategy has largely been suppressed. Correspondence to this DVD suggests an explanation. Censorship While the US media has failed to cover the massive violation of the basic human rights of the Afghan people, hundreds of independent correspondents have risked their lives to try to reveal this violation to the rest of the world. Correspondence to this DVD suggests that the media often uses government censorship to suppress the truth. The Anti-Drug Strategy A myth has been built around the anti-drug strategy in Afghanistan. Instead of depleting the profits of drug dealers and traffickers, the US government has been largely successful in not only turning them into government informants but in making those with standing opposition to the war on drugs guilty of drug trafficking. Correspondence to this DVD suggests that because the US government has been so successful in turning on its own citizens, the war on drugs in Afghanistan has been a criminal enterprise run by the US government itself. Operation: Enduring Freedom Since 2001, the US invasion and occupation of Afghanistan has cost over one trillion dollars. Operation: Enduring Freedom, the official

name of the invasion and occupation of Afghanistan, is the largest military campaign in United States history. Correspondence to this DVD suggests that in order to finance this campaign and its aftermath, we have been given a currency which is neither honest nor clean. The Media and Afghanistan

A thiol-ene hydrogel with fast healing capabilities and high tensile strength. The thiol-ene click reaction provides an effective tool for non-covalent and fast-reacting covalent networks. Thiol-ene click chemistry was utilized to fabricate the first thiol-ene hydrogel with fast healing capabilities and high tensile strength. A thiol-ene reaction was introduced to a standard thiol-acrylate hydrogel. Upon the photoirradiation, the hydrogels rapidly formed a covalent and non-covalent network simultaneously in less than 5 min. The healing speed and the mechanical strength of hydrogels could be easily tuned by the prepolymer and the photoinitiator concentrations. The resulting hydrogels exhibited fast healing properties and high mechanical strengths, which were even comparable to that of natural tendon tissues. Pulsed laser-induced optical heating was used to heal the hydrogels. This method did not only significantly increase the mechanical strength of the hydrogels, but also reduced the healing time, opening the way to the fast healing of bioscaffolds for tissue engineering.[Analysis of the center of the nucleus vasculosus of pituitary]. Studies on the pituitary center of the vasculonuclear complex have shown that it is not a single structure but a system of structures of variable size and localization, without any particular contact between the walls of its different parts. The nervous network of the pituitary is composed of two sorts of cells: one that forms part of the periphery of the nucleus (ependymal cells), and another that forms the actual core of the nucleus (vasculonuclear cells, nicotinamide adenine dinucleotide hydrate dependent), which is extremely rich in Golgi's pale bodies. The vasculonuclear cells form a basket around the entire periphery of the nucleus and the central tegument, where they contact the apical third of

each pituitary cell and the central third of the basal cells of the pars intermedia of the mesenchyma. The apical part of the pituitary cell is in contact with the neurohypophysis and with the pars intermedia of the mesenchyma. Two groups of cells are particularly abundant in the vasculonuclear basket. On the one hand, the numerous cells that form the so-called pale bodies. This class of cells is constituted by bipolar cells with round and elongated nuclei
