Protected Folder Crack Free Download [Mac/Win]

* Simple interface, attractive and elegant design * Lock/hide files/folders * Password protection * Import/export files/folders * Process files/folders in batches * Lock files/folders * Import files/folders * Optionally configure settings * Optionally add/remove items to/from exclusion list * Optionally display the items in a slideshow * Optionally add/remove items from the list * Optionally protect files/folders with password * Optionally hide files/folders * Optionally slow slide move effect * Optionally fade files/folders * Optionally change interface language * Optionally show the items in a slide show * Optionally disable Protected Folder Activation Codes auto uninstalling * Optionally change folder icons * Optionally disable hiding Protected Folder Download With Full Cracks on startup * Optionally disable Protected Folder Cracked Accountss icons on startup * Optionally clear file lists after shutdown * Optionally enable folder lock when adding files/folders * Optionally enable folder lock when importing files/folders * Optionally enable folder lock when closing * Optionally enable folder lock when removing items from the list * Optionally enable folder lock when importing items * Optionally enable folder lock when exporting items * Optionally show the program window during startup * Optionally show the password window during startup * Optionally display the password window when trying to change the password * Optionally save the user list to the config file * Optionally exclude files/folders from the program * Optionally show the folder icon on the taskbar * Optionally show the program window when minimizing * Optionally minimize the program window when minimizing * Optionally open the program window when maximizing * Optionally close the program window when maximizing * Optionally change the icon of the program window * Optionally change the icon of the program window when minimizing * Optionally display the program window when showing the desktop * Optionally hide the program window when showing the desktop * Optionally hide the program window when adding items to the list * Optionally hide the program window when importing items * Optionally hide the program window when closing * Optionally hide the program window when exporting items * Optionally hide the program window when removing items from the list * Optionally hide the program window when importing items * Optionally disable folder icons when adding files/folders * Optionally disable folder icons

Protected Folder Crack + Product Key

The program keymacro is a simple, easy-to-use tool that allows you to quickly access your hidden or protected files or folders. Upon initializing, the program asks you to select the source folder to examine and then provides you with a list of all files and folders that are hidden or protected. This is followed by the usage instruction for the shortcut. Once you have chosen a destination folder, it will be scanned and all hidden and protected files and folders will be listed. You can view files by clicking on them or just open them by clicking on the shortcut. This means that files can be deleted, renamed, moved or copied, if they are not in the directory of the destination. In addition, you can also use other shortcuts, like selecting text in a document. The program consists of a user manual with screenshots and comes with a fairly good response time. In addition, it includes a well-drawn help file. ErrorGuard Description: ErrorGuard is a simple-to-use program that prevents unwanted shutdowns of your computer by keeping an eye on all the usual suspects. Upon initialization, it asks you to enter a name of the program and a group name. The program then looks

for (hidden) *.ini files (with the aforementioned name), *.lnk files, *.dll files (as well as folders with the same name), *.url files, *.crw files and *.vbw files. In addition, it will also be looking for *.exe, *.com and *.bat files. This process can be configured (if required) using the "Options" area. If you find any unauthorized files, you can delete them, modify them or move them to an other folder. In the "Options" area you can configure settings and decide whether to display a notification window in addition to the error log and the list of errors. The program response time is better than average and it can be used in silent mode. We were able to perform all our tests without any errors or crashes. The program includes a pretty good user manual with a screenshot and a well-drawn help file. However, the instructions are not as clear as the error log, so it may be that you need to restart your computer to get rid of any errors. ErrorGuard is very lightweight and consumes little system resources. The price is pretty decent, considering the quality of the program. RESOPROT Description: RESOPROT is a simple-to-use 1d6a3396d6

Protected Folder is a simple-to-use program which enables you to lock and hide your files and folders. This type of software is ideal if you are sharing your computer with multiple users, since it provides you with a specific level of security. Upon initialization you are required to set up the program password. The interface is clean and pretty intuitive. Files and folders can be imported into the list by using either the file browser or "drag and drop" method. Batch processing is supported. Once items have been added to the list, they automatically become locked. In the "Options" area you can configure settings and disable hiding or denying read/write access to the respective files or folders. In addition, you can change the program password (optionally specify a hint), create an exclusion list, disable the slow slide move and fade effects and change the interface language. The program takes up a very low quantity of system resources (which is barely noticeable), includes a well-drawn user manual with snapshots for novices and has a very good response time. No errors have occurred during our tests. The program password is also required if you want to uninstall Protected Folder. Plus, your locked files and folders will not automatically disappear after uninstall (as this happens with most similar tools). We highly recommend Protected Folder to all users. Protected Folder is a simple-to-use program which enables you to lock and hide your files and folders. Plus, your locked files and folders will not automatically disappear after uninstall (as this happens with most similar tools). We highly recommend Protected Folder to all users. My favori... My favorite feature of this app is the individual password and the absence of a complex license.I would also like to see additional features (i.e. to create a zip archive or view the contents of a file) but this is only a minor annoyance as it is an excellent piece of software. The app is easy to install and use and does exactly

what it is supposed to do. I would recommend this app to others with no hesitation. What I like: - simple and well-designed interface - ability to specify file extensions - the ability to hide a file without preventing it from being opened by another application - the ability to set a password for the protected file - the ability to use the file's extension as the file name What needs work: - sometimes when you choose a folder to protect, the dialog box will flash up briefly, but the protected folder is not created. If you enter a password, it will never be required again. What can be improved: - consider renaming the app because it is quite generic and is sometimes hard to find if you are using other apps with similar functionality. Also, consider putting a link to your web site on the About box and putting a link to your license on the Exe What is awesome: - great job! Thanks to you and to everyone who's put in the effort to improve the Windows version of the app. I love that someone has spent the

System Requirements:

Windows 7 and Windows 8 Intel Pentium 4 or AMD Athlon 64 800 MHz Processor or higher 4 GB RAM 500 MB or higher 20 GB or higher 600 MB or higher video memory 16 GB or higher hard drive space Sound card and speakers DirectX 9 or higher Mouse or Game Controller Full HD screen resolution (1920x1080) MSRP: $40.00, MSRP: $9.99, MSRP: $
