If you enjoy using Calcgen, then.--- date: April 2015 title: Single-Page Apps description: Learn how to create a single-page app using AngularJS and the Angular CII. --- # Single-page Apps with AngularJS and the Angular CII The rise of single page applications like Angular was a reaction to the decline of dedicated web pages, and the consequent shift to 'web apps'. The more popular mobile platforms have their own single-page apps framework. We can use AngularJS as a full or partial web application. This tutorial shows how to package an AngularJS application with Angular's dependency injection, modules and components. ## Prerequisites Before you get started you'll need to make sure you have Node.js and the Angular CII installed. ::: tip We'll show the [setup process](for creating and hosting a website, but any method of getting your own server/cloud VM with Node.js installed should work fine. ::: ## Install the Angular CII We can install the Angular CII using the Node Package Manager npm. Run the following commands. ::: example npm install -g angular-cli ::: ## Create and Deploy the Angular Application We'll have this project stored in a local directory. Open it as the Angular CII points you in the right direction: ::: tip The CII will ask you if it has access to change the `.angular-cli.json` file. You can ignore this stage, and later set [`cliBaseDir`
