electrocatalytic reduction of

nitroaromatics by a dendritic MgO-Pd/C catalyst. This study is a first example of the efficient electrocatalytic reduction of nitroaromatics in aqueous media using a dendritic MgO-Pd/C catalyst. For this study, we found an optimized MgO-Pd/C catalyst with the dendritic structure in addition to its ideal morphology and high catalytic activity as an electrode material. The MgO-Pd/C catalyst was prepared by impregnating commercial MgO with a dendritic Pd/C catalyst using an in situ solid-state reduction method. Notably, the dendritic Pd/C catalyst acts as a dominant promoter for the efficient electrocatalytic reduction of nitroaromatics by the MgO-Pd/C catalyst. To investigate the active sites of the catalyst, a combination of fluorescence and thermal analyses was applied. The higher efficiency of the electrochemical reduction of nitroaromatics is attributed to the highly active surface sites that result

from the unique morphology of the dendritic structure. Q: How to create a new row based on a row with same unique id I have a table with UserId, UserTypeId, UserValue. What I'm trying to do is to create a new row based on existing row if UserTypeId!= 7, and if not if previous row having UserTypeId!= 7. For example: UserId UserTypeId UserValue -----

456	1	42	456	7	7	456	8	43	456	9
44										

And what I have now is: UserId
UserTypeId
