Getting layers straight In the box on Layers, you can see a row of little buttons on the left side that appear when the Layers panel is open. The buttons you see depend on what tool is currently selected in the toolbox, but you can see that the layer button for the background layer is selected and that the color buttons are also visible when the color channel options are open. One of the key things to understand about layers is that you can switch between them. You can keep the original image or use a separate layer for the text, for example. Layers are always on top of one another (the original image is always on top of the text), but as you can see in the box on Layers, they can be moved around.

Short-term anaerobic fermentation of glycine and glucose to ethanol by mixed cultures of clostridia. Fermentations were carried out at different temperatures in 7% (w/w) glucose and glycine solutions. The glycine was fermented at 18 degrees C after 48-72 hours and ethanol was produced. The fermentation was inhibited at 4 degrees C, above. When the glucose was used the following intermediate products were formed: acetate, butyrate, propionate, lactate, glycerol and CO<sub>2</sub>. At 60 degrees C the fermentation ceased after 30 hours and at 34 degrees C after 24 hours. Glycine was fermented at 18 degrees C at the end of the growth phase of *Clostridium pasteurianum* CCM 2339. The formation of metabolites was similar to the results obtained from 14C-glucose. The experiments showed that the mixed culture of *Cl. pasteurianum* CCM 2339 and *Cl. pasteurianum* CCM 2302 could be useful for studies in the field of organic anaerobic fermentation.

Q: How to remove aspect of kanji What type of stroke order is used for the following kanji ㇿㇿㇿ In my Macbook a lot of the recent kanji characters are being half drawn. How do I remove this aspect from all the characters. For example if there were up to 3 kanji characters the end of the characters are half redrawn. For example here: This is what I am talking about: A: This is due to the Apple "Apple Picking" software, which seems to be causing this and other UI problems. I would not worry about it. And, in any case, it is generally easier to draw the characters correctly the first time. Even if I do "download" characters, I am only downscaling the supplied images to an approximate size for 10" 1024x768 screens. If you are concerned, put the display into edit mode and correct it yourself.

News Cirque du Soleil is back in the big time. The digital and visual effects teams are at it again, completely transforming the iconic "O" stage in Montreal into a world-class spectacle. "O" was originally built on the Rue Notre-Dame on rue Peel in downtown Montreal. It was built in 1994 to celebrate the 50th anniversary of Cirque du Soleil, the French-Canadian company that produces acrobatic performances, touring shows and spectacular film sets. But by the start of 2010, the stage was in need of major rehabilitation. Thanks to a new tax credit program and a federal grant, Cirque du Soleil was able to have "O" completely upgraded before it opened in 2009. "The stage and props are high impact when it comes to the cost and size," says Michael Baker, program manager of visual effects for Cirque du Soleil at Digital Motion. "We knew the stage would be an incredible challenge for us. We just had to make it work." But they succeeded. Their first job was to transform the stage from an open to a closed environment, cutting and replacing the walls and installing a retractable roof and metal barrier. "We were fortunate to have a brief window of time," he says. "The location was the perfect size for us to build in." Then they added the water stage, the aerobatics, the lighting, and the costumes. The designer on "O" is 32-year Cirque veteran Bernard Havert. "The design of the stage was very challenging," Havert says. "This was the first time I had a stage that had to move. The water stage is original and very unique. We had to build the theatre, and the stage inside is where it's at." Visual effects was given the key to the theatre, which is the only set in the show. They built the theatre, set and wardrobe along with stage and design. The set designer, Christian Gudin, was tasked with moving everything to the stage and integrating it into the production. Gudin started with the original floors, which were made of wood, with flecks of pink paint on them. He covered up the floors, which were showing a bit of wear and tear. "The floor was in perfect shape, but the paint had peeled up from the wood," Gudin says. "I thought I could solve that problem with new finishes."
